Table 5. State-of-the-art models on the ImageNet-1K validation set (single-crop testing). The test size of ResNet/ResNeXt is 224×224 and 320×320 as in [15] and of the Inception models is 299×299.

在计算量相同的情况下，错误率更低

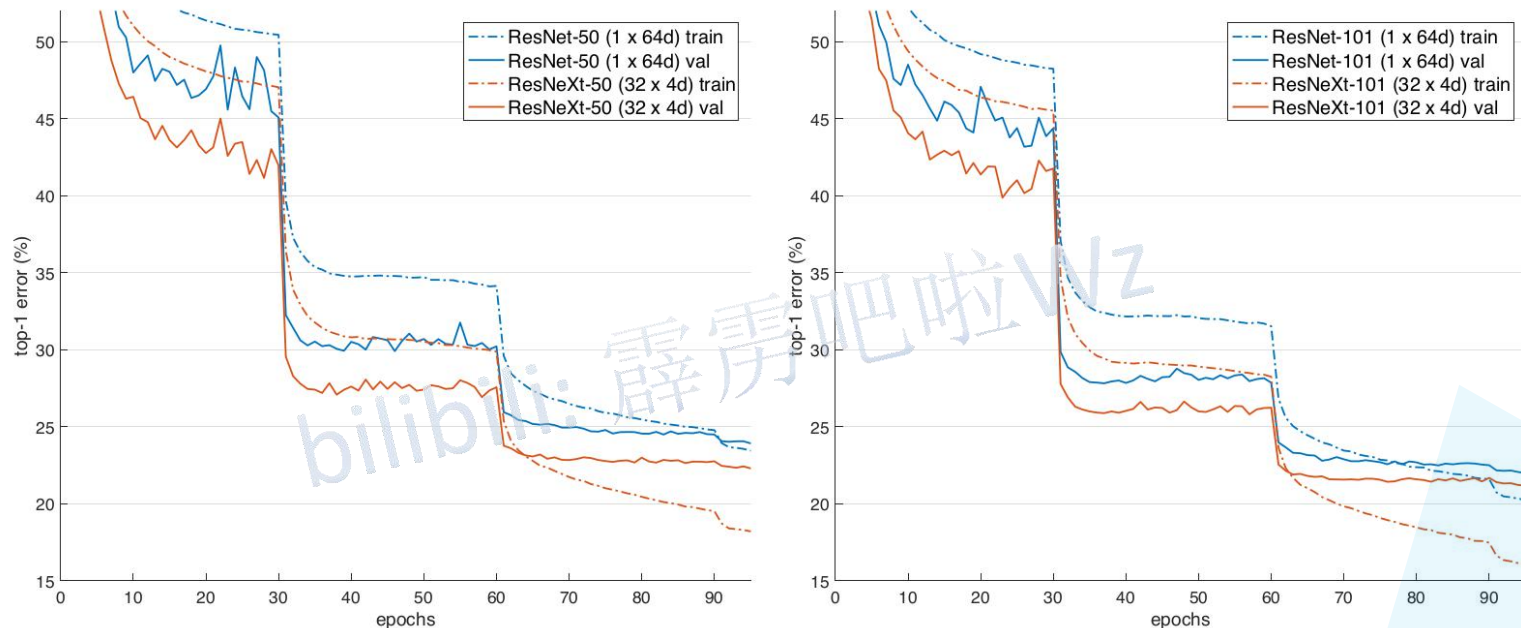

Figure 5. Training curves on ImageNet-1K. **(Left):** ResNet/ResNeXt-50 with preserved complexity (~ 4.1 billion FLOPs, ~ 25 million parameters); **(Right):** ResNet/ResNeXt-101 with preserved complexity (~ 7.8 billion FLOPs, ~ 44 million parameters).

ResNeXt

Convolution

$\times n$

$channel=n$

Parameters:

$$k \times k \times C_{in} \times n$$

Group Convolution

\times

$\frac{n}{2}$

\times

$\frac{n}{2}$

$channel=\frac{n}{2}$

$channel=\frac{n}{2}$

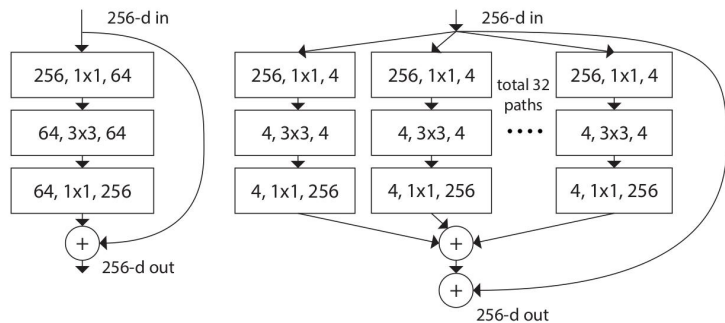

Parameters:

$$(k \times k \times \frac{C_{in}}{g} \times \frac{n}{g}) \times g$$

$$k \times k \times C_{in} \times n \times \frac{1}{g}$$

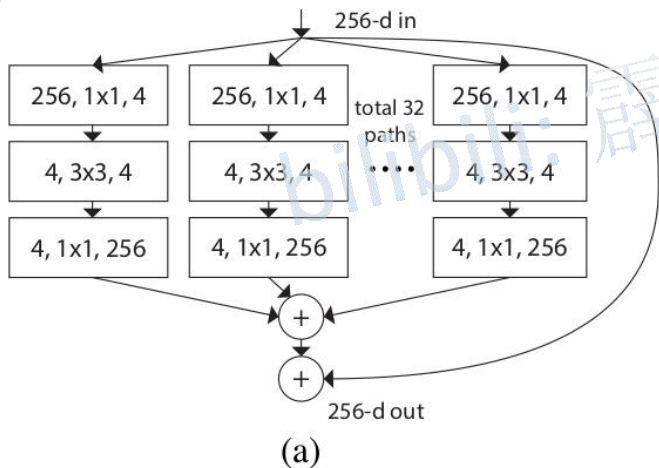

当 $g=C_{in}$, $n=C_{in}$ 此时就是DW Conv

Table 3. Ablation experiments on ImageNet-1K. (**Top**): ResNet-50 with preserved complexity (~ 4.1 billion FLOPs); (**Bottom**): ResNet-101 with preserved complexity (~ 7.8 billion FLOPs). The error rate is evaluated on the single crop of 224×224 pixels.

ResNeXt

We note that the reformulations produce nontrivial topologies only when the block has depth ≥ 3 . If the block has depth = 2 (e.g., the basic block in [14]), the reformulations lead to trivially a wide, dense module. See the illustration in Fig. 4.

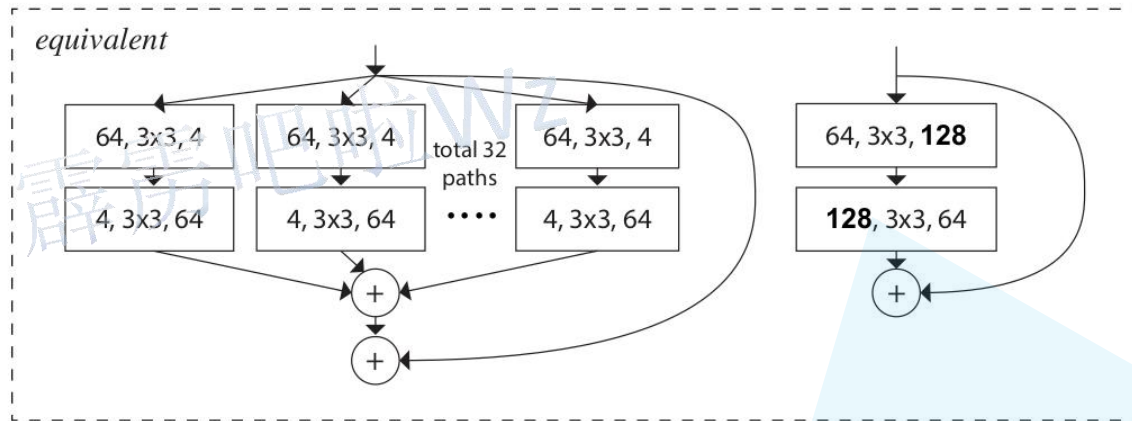

Figure 4. **(Left)**: Aggregating transformations of depth = 2. **(Right)**: An equivalent block, which is trivially wider.
